An Update on Housing Market and Mortgage Performance in North Carolina
1st Quarter, 2014
Summary of Findings

This report analyzes the size, composition, and performance of prime and subprime home mortgages in North Carolina. It also provides information on trends in the state's housing market and charts with metropolitan area and county level data.

State Delinquency and Foreclosure Rates

- Foreclosure and 90+ day delinquency rates, in the prime and subprime markets, decreased in North Carolina in the quarter and over the year.
- The foreclosure rate in North Carolina declined from 2.1 percent in March 2013 to 1.0 percent in March 2014. Over the year, the share of North Carolina mortgages with payments more than 90 days past due fell from 2.8 percent to 2.5 percent. (Table 7)
- Since March 2013, North Carolina's prime foreclosure rate decreased 1.0 percentage point to 1.0 percent. The state's prime 90+ day delinquency rate edged down 0.2 percentage point to 2.4 percent over the same period. (Table 8)
- The subprime foreclosure rate in North Carolina dropped from 6.3 percent in March 2013 to 2.9 percent in March 2014 while the 90+ day delinquency rate fell from 9.2 percent to 6.0 percent. (Table 9)
- Subprime mortgages made up only 6.7 percent of all mortgages in the first quarter of 2014 but accounted for 26.0 percent of the foreclosure inventory. North Carolina ranks 43rd in the nation in its share of subprime loans. (Figure 2 and Table 4)

Metro Area Highlights

- In March 2014, Jacksonville reported the highest metro-level foreclosure rate of 1.5 percent; however, every metro area in the state had rates lower than the U.S. foreclosure rate of 1.9 percent. Additionally, Jacksonville and Rocky Mount posted the highest 90+ day delinquency rate (3.8 percent) and Kill Devil Hills reported the lowest (1.4 percent). (Table 7)
- Kill Devil Hills continued to have the highest share of interest only mortgages of all MSAs in North Carolina (4.7 percent) while Jacksonville reported the highest share of adjustable rate mortgages in the state (12.0 percent). (Table 6)

State Economic Conditions and Looking Forward

- Rising house prices can help to reduce the possibility of mortgage delinquency or foreclosure because a household can sell the house instead of entering default. According to the Federal Housing Finance Agency, house prices in North Carolina rose 0.3 percent in the first quarter of 2014 and 1.7 percent on a year-over-year basis.
- Lower rates of unemployment can also reduce the likelihood of mortgage delinquency since the loss of a job can affect a household's ability to repay. The North Carolina unemployment rate (NSA) fell from 8.4 percent in March 2013 to 6.6 percent in March 2014. (Table 11)

For more information on foreclosures, please visit the Richmond Fed's Foreclosure Center at http://www.richmondfed.org/community_development/foreclosure_resource_center/

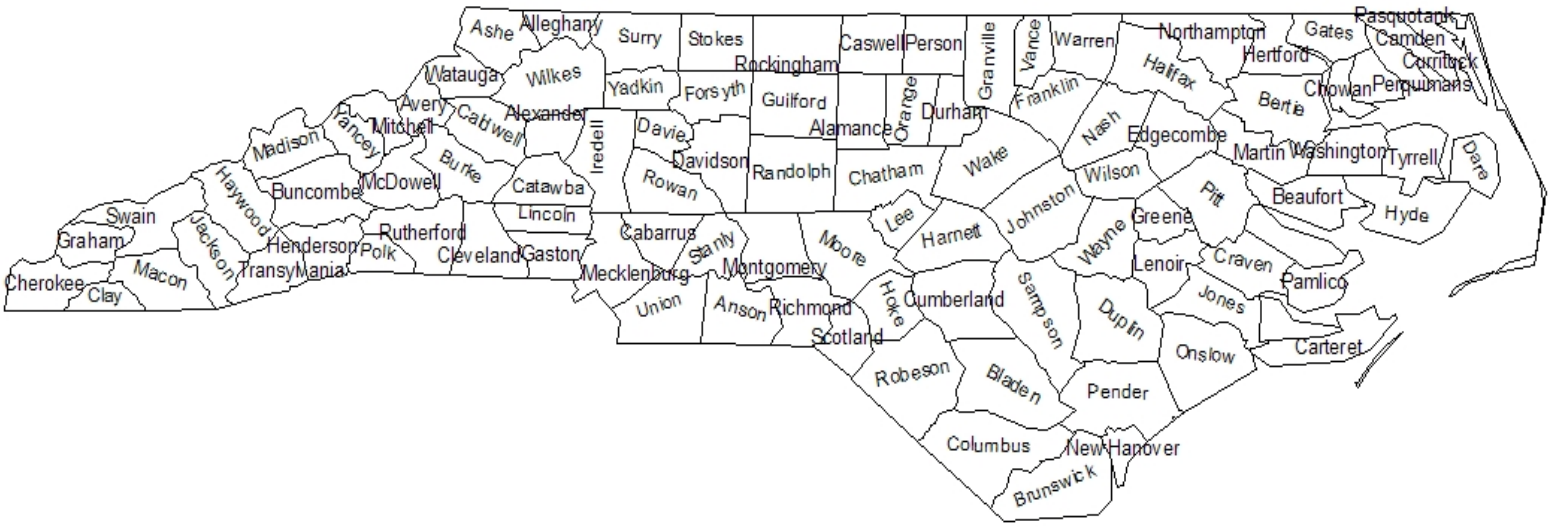
North Carolina Counties



Sources and Notes

House Price Index
Federal Housing Finance Agency/Haver Analytics
Weighted repeat sales index, measuring the average price changes in repeat sales or refinancing on the same single family properties. Based on transactions involving conforming, conventional mortgages purchased or securitized by Fannie Mae or Freddie Mac.

Unemployment Rate
Bureau of Labor Statistics/Haver Analytics

General Housing Statistics
Census Bureau

Metropolitan Statistical Area Definitions
Office of Management and Budget, 2008

Loan Distribution and Loan Performance
(1) Mortgage Bankers' Association/Haver Analytics
(2) Loan Processing Services Inc. Applied Analytics Mortgage Data

Loan Processing Services, Inc. periodically enhances the LPS mortgage data by adding servicers. Additional servicers can change past performance numbers. Therefore, rates in this edition of the Mortgage Performance Summaries may differ from those in previous editions.
