Selected open source software

panflute Python package for writing Pandoc filters, extending the abilities of Markdown documents (*about 14,000 downloads per month*).

quipucamayoc Python package that simplifies the extraction of historical data from scanned images and PDFs. Includes PyTorch bindings to pre-trained deep learning models.

fedplot R library that creates Fed-style charts using ggplot2.

reghdfe and **ivreghdfe** Stata packages that efficiently run linear and instrumental-variable regressions with many levels of fixed effects (*top-ten most downloaded Stata packages*).

ppmlhdfc Stata package implementing Poisson pseudo-maximum likelihood regressions with multi-way fixed effects. The estimator employed is robust to statistical separation and other convergence issues.

ftools Fast Stata commands for large datasets (*top-ten most downloaded Stata packages*).

require and **setroot** Stata packages for facilitating reproducible research.
